

Centers of Value

NexUS Centers of Value (COV) is an enhanced benefit program that gives you a choice when receiving health care services.

The COV program works with specific facilities to provide medical services related to a range of treatments and procedures. These facilities have been identified in providing cost-efficient care that will allow you to keep your out-of-pocket costs to a minimum. Your comprehensive health plan will cover these procedures at 100% before meeting your deductible.

If you believe you could benefit from the COV program, please contact our Care Coordinator to reach an adviser.

*MembCrS with a high deductible plan must meet their deductible
