

Lowering Health Care Costs Begins Here

A Solution to High-Quality, Cost-Efficient Health Care

NexUS provides employers a solution that reduces costs and improves the health of their workforce. NexUS brings together the Patient, the Primary Care Physician and the Employer, all working together to measure and improve health outcomes and cost savings.

Primary Care Physician and Patient Engagement

The success of NexUS centers on each member selecting a primary care physician (PCP) who is incentivized for better outcomes (improving quality and lowering costs).

NexUS Tier 1 Providers

Members will experience lower cost share when selecting Tier 1 providers. Tier 1 providers include participating NexUS PCPs, specialists, labs, surgery centers and imaging centers.

Managing High Risk Members

NexUS offers a care navigator who is a registered nurse to identify and manage members considered high risk. The care navigator will work with the member's PCP to develop care plans as well as working with other providers in providing access and coordination of care.

A care navigator will also provide follow-up care for all members seen in the emergency room or admitted to the hospital by accessing real-time discharge information from all Kansas hospitals.

Providers, Employers and Employees Working Together to Lower Healthcare Costs
