

The NexUS approach to Health Care

Employers choose to add NexUS to their health care plans

Employees choose a primary care physician

Care Navigators coordinate care and educate employees

Doctors are measured for quality of care

Everyone saves money and we have healthier, happier communities

NexUS, by ProviDRs Care, aligns provider and employer incentives and focuses on the cost drivers of health plans to reduce cost. Savings start with every member selecting a primary care provider (PCP).

On average, NexUS groups are experiencing 33% less medical costs than standard Preferred Provider Organization plans

Through NexUS, participating health plans will focus on PCPs, paying physicians for better outcomes and savings based on their performance.

Member Engagement

The NexUS model requires members to select a PCP. However, they do not need approval from their PCP to see a specialist.

Members have financial incentives through plan design with lower copays and deductibles when seeking care from their PCP and Tier 1 providers.

Tier 1 includes lower-cost specialists, free-standing lab and imaging facilities and ambulatory surgery centers. Using Tier 1 providers helps reduce costs to the plan and keeps health care premiums affordable.

Care Navigator Program

The Care Navigator program assists high-risk members by helping members manage their care and treatment plans.

The care coordinator will support high-risk members in developing and meeting goals as well as coordinating their care in collaboration with the PCP.

Members will also receive a follow up call after being discharged from the emergency room or hospital. The care navigator will assist in helping schedule follow up appointments with the appropriate provider as well and understanding discharge instructions.
